

## RELEASE CONTROL DOCUMENT

## SOFTWARE RELEASE CONTROL DOCUMENT

The software release control document is an account of all DSX Software and Firmware versions. It includes when they were created, if they were released, when they were released and the release classification. If a version is not listed here, it was not a Release Candidate. Only those that have an actual release date were ever distributed and made available to the DSX Dealer Network or public. Each Released Version has a classification that describes the type and urgency of the upgrade. All DSX Updates are the summation of all prior updates. If you Load an update, you have effectively loaded all prior updates.

**Minor Update** – addition or change to features or function of a noncritical component of the system.

**Major Update** – addition or change to features and operational characteristics that may have an impact on system operability and performance.

**Critical** – is a correction to a feature or function that will have a negative impact on normal operation if not implemented.

**Security Update** – is a change that addresses the security of the system or vulnerability of the data within.

**E.O.L – End of Life** – Product will no longer receive updates and can no longer be repaired.

The Summary Class will display the highest classification of all Release Candidates that comprise the Release.

WinDSX SQL	Creation Date	Release Status	Release Date	Class	Summary Class
6.1.17	02/18/2025	Released	04/28/2025	Minor	Minor
